

Domain Training - Smart Metering & AMI

Introductory support material created from the supplied 13-week training plan. It gives each week a clear session flow, outcomes and lightweight practice.

Week at a glance

Session	Focus	Expected outcome
Session 1	Smart Metering & AMI	Understand the smart metering ecosystem, AMI purpose, major components and end-to-end data flow.
Session 2	Smart Meter & Data Acquisition	Review meter measurements, communication paths, head-end/data acquisition concepts and operational data collection.
Session 3	MDMS & Data Intelligence	Understand meter-data validation, storage, processing, analytics and how meter data becomes usable business information.
Session 4	Smart Meters Portfolio	Review common smart-meter capabilities, use cases and how a meter portfolio supports utility operations.

Session notes

Session 1: Smart Metering & AMI

Understand the smart metering ecosystem, AMI purpose, major components and end-to-end data flow.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 2: Smart Meter & Data Acquisition

Review meter measurements, communication paths, head-end/data acquisition concepts and operational data collection.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 3: MDMS & Data Intelligence

Understand meter-data validation, storage, processing, analytics and how meter data becomes usable business information.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 4: Smart Meters Portfolio

Review common smart-meter capabilities, use cases and how a meter portfolio supports utility operations.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Practice and reflection

These are lightweight practice prompts for the onboarding prototype, not an official assessment.

1. Write five key terms from this week and explain each in one sentence.
2. Draw a simple flow showing how the main concepts connect.
3. List two questions you would ask the trainer before using these concepts in a real project.
4. Identify one practical example from a utility, software system, workplace process or assigned role.
5. Write an end-of-week summary: what you understood, what remains unclear, and what you want to practise next.

Completion checklist

- ☐ I attended/reviewed the planned sessions.
- ☐ I can explain the week's main concepts at a basic level.
- ☐ I completed at least one practice/reflection activity.
- ☐ I recorded questions or gaps for follow-up.
- ☐ I am ready to proceed to the next onboarding chapter.

Note: This is prototype support material. The supplied training plan remains the source for the official week/topic sequence; trainers may provide deeper or updated material.
