

Domain Training - Connected Energy Systems

Introductory support material created from the supplied 13-week training plan. It gives each week a clear session flow, outcomes and lightweight practice.

Week at a glance

Session	Focus	Expected outcome
Session 1	EV Charging & CPMS	Understand EV charging basics, charger-to-platform communication and the role of a Charge Point Management System.
Session 2	Gas Distribution Network	Introduce gas distribution operations, metering and digital monitoring concepts.
Session 3	BESS & Communication Technologies	Understand battery energy storage basics and the communication layer used by connected energy assets.
Session 4	Project Management & Agile Practices	Review Agile delivery, sprint planning, stand-ups, tracking, collaboration and iterative delivery.

Session notes

Session 1: EV Charging & CPMS

Understand EV charging basics, charger-to-platform communication and the role of a Charge Point Management System.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 2: Gas Distribution Network

Introduce gas distribution operations, metering and digital monitoring concepts.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 3: BESS & Communication Technologies

Understand battery energy storage basics and the communication layer used by connected energy assets.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Session 4: Project Management & Agile Practices

Review Agile delivery, sprint planning, stand-ups, tracking, collaboration and iterative delivery.

Quick check: Explain the idea in your own words and identify one practical place where it could be used.

Practice and reflection

These are lightweight practice prompts for the onboarding prototype, not an official assessment.

1. Write five key terms from this week and explain each in one sentence.
2. Draw a simple flow showing how the main concepts connect.
3. List two questions you would ask the trainer before using these concepts in a real project.
4. Identify one practical example from a utility, software system, workplace process or assigned role.
5. Write an end-of-week summary: what you understood, what remains unclear, and what you want to practise next.

Completion checklist

- ☐ I attended/reviewed the planned sessions.
- ☐ I can explain the week's main concepts at a basic level.
- ☐ I completed at least one practice/reflection activity.
- ☐ I recorded questions or gaps for follow-up.
- ☐ I am ready to proceed to the next onboarding chapter.

Note: This is prototype support material. The supplied training plan remains the source for the official week/topic sequence; trainers may provide deeper or updated material.
